5                   MOUNTING DEVICES UTILIZING ELASTOMERS OF DIFFERING  
                    CHARACTERISTICS AND POST-VULCANIZATION BONDING

10                                   ABSTRACT OF THE INVENTION

                    The invention includes a mount having an input side attachment member and a  
plurality of isolation pads positioned within the input side attachment member. At least  
two of the pads have different performance characteristics. The invention further  
includes an output side attachment member positioned within the input side attachment  
15   member and one or more of the pads are post-vulcanization bonded to at least one of the  
input side attachment member and the output side attachment member.
